Implementations of stipulated conditions in NOC are fulfilled post which consent to operate has been granted by SPCB from time to time. The existing consent to operate is valid upto 31.12.2020. Productions of bauxite are within limits specified in consent to operate.
2	The environmental clearance is subject to approval of the state land use Department, Government of Jharkhand for diversion of agricultural land for non-agricultural use.	Land acquisition is being done with permission of competent authority of State Government i.e. concerned Deputy Commissioner (D.C.) under CNT Act. The compensation and facilities are being provided as per norms set in agreement. Thus the provision is taken care off.
3	The exploration shall be completed within 2.5 years and thereafter the proponent shall come up with a firm proposal for mining, based on the estimated reserves. The reclamation plan, post mine land use and progressive greenbelt development plan shall also be prepared and submitted with the revised proposal.	Mining is in progress. Required exploration is already done. Reserve and resource estimated on basis of explored bore holes in area. Revised reclamation plan, post mine land use, green belt development plan submitted and approved by the IBM. Review of Mining Plan along with progressive mine closure plan (current mining scheme/mining plan) is valid up to 31.03.2024.
4	Mining shall not intersect groundwater. The mine working shall be restricted to ground water table. Prior approval of the Ministry of	Shallow depth mining is being carried out up to maximum depth of 20.00 mts. Hence there will be no

	<p>Environment & Forests and Central Ground Water Authority shall be obtained for mining below water table.</p>	<p>intersecting of the ground water table due to mining activities. Mining operation confined within shallow depth (20 m max) and not intersected ground water. As per the survey, the ground water table is at 45-60 m below mining horizon. Thus there is no chance to intersect ground water table during mining operation. In future also, working zone will be restricted to above ground water table. We undertake that no mining is/was carried out below ground water table and the same statusco will be maintain in future also.</p>
5	<p>Top soil shall be stacked properly with proper slope with adequate measures and should be used for reclamation and rehabilitation of mined out areas.</p>	<p>Top soil is being stacked properly with proper slope as and when required. Sequential backfilling and reclamation of mined out area are being exercised. Topsoil is being spread on backfilled area for reclamation of area.</p>
6	<p>The waste generated shall be concurrently backfilled in the mined out area. There shall be no external OB dump. Monitoring and management of rehabilitated areas should continue until the vegetation becomes self-sustaining. Compliance status should be submitted to the Ministry of Environment & Forest on six month basis.</p>	<p>Overburden and waste rock are being used for back filling. Data pertaining to backfilling is enclosed as Annexure. 4 Monitoring and management of rehabilitated areas is being done through effective supervision. No external dump exists as on date.</p>

7	<p>Catch drains and siltation ponds of appropriate size should be constructed to arrest silt and sediment flows from mine working. The water so collected should be utilized for watering the mine area, roads, green belt development etc. The drains should be regularly desilted particularly after monsoon and maintained properly.</p> <p>Garland drain (size, gradient and length) shall be constructed for mine pit and sump capacity should be designed keeping 50% safety margin over and above peak sudden rainfall (based on 50 years data) and maximum discharge in the area adjoining the mine site. Sump capacity should also provide adequate retention period to allow proper setting of silt material. Sedimentation pits should be constructed at the corners of the garland drains and desilted at regular intervals.</p>	<p>No run off is being generated from mining activities. However to collect and manage rainwater during monsoon drains pit sumps are made, part of mined out area is used as settling tank. Settled water is being used for sprinkling of quarry, roads, green belt development, etc.</p> <p>Garland drain, Catch drains and siltation pond has been constructed and is being progressively developed with progress of mining.</p> <p>Sump of adequate capacity is being provided and maintained as required.</p>
8	<p>Plantation shall be raised in an area of 78.44 ha including a green belt of adequate width by planting the native species around the ML area, roads, reclaimed area etc. in consultation with the local DFO / Agriculture Department. The density of the trees should be around 1500 plants per ha.</p>	<p>Plantation is being carried out on regular basis with progress of mining activity in order to create a green belt of adequate width around the ML area.</p> <p>During FY 2019-20, total 4788 nos. saplings were planted on reclaimed area. Total 14.50 Ha areas has been planted till date. Rest to be complied during project period.</p>
9	<p>The project authority should implement suitable conservation measures to augment ground water resources in area in consultation with Regional Director, Central Ground Water Board.</p>	<p>Suitable conservation measures to augment ground water have been taken.</p> <p>Viz. Water harvesting pond, garland drain, recharge pit etc.</p>
10	<p>Regular monitoring of ground water level and quality should be carried out by establishing a network of existing wells and constructing new piezometers during the mining operation. The monitoring should be carried out four times in a year – pre-monsoon (April-May), monsoon (August), post-monsoon (November) and winter (January) and the data thus collected may be sent regularly to MOEF, Central</p>	<p>We are not using ground water for any mining purpose.</p> <p>Drinking water quality Monitoring report is enclosed as Annexure-1.</p>

	Ground water Authority and Regional Director Central Ground Water Board.

11	Prior permission from the competent authority should be obtained for drawl of water from the surface water bodies.	Rainwater harvested during rainy season is being used for sprinkling on haul roads and raising plantation. We are not using any water from natural streams/ ground water for mining.
12	Water monitoring both for quality and quantity shall be carried out at four locations namely one spring and three streams. Six monthly report should be submitted to the Ministry of Environment and Forest and its Regional Office located at Bhubneshwar.	The quality parameter of the nearby spring has been monitored, report attached. Annexure 1
13	Vehicular emissions should be kept under control and regularly monitored. Measures shall be taken for maintenance of vehicles used in mining operations and transportation of mineral. The vehicles should be covered with a tarpaulin and shall not be overloaded.	To keep vehicular emissions in control, company vehicles are periodically checked and repaired. The vehicles are being covered with tarpaulin while transportation of mineral.
14	Drills should either be operated with dust extractors or should be equipped with water injection system.	Wet drilling is done in the drill holes for dust suppression.
15	Blasting operation should be carried out only during the daytime. Controlled blasting should be practiced. The mitigative measures for control of ground vibration and to arrest fly rocks and boulders should be implemented.	Blasting time is fixed during Lunch Time i.e. 1.00 PM -2.00 PM. We have control blasting permission. Controlled blasting method is in practice. Ground vibration study has been conducted by IIT, Kharagpur. Efforts and mitigative measures are being taken to mitigate impact of blasting.
16	Consent to operate should be obtained from SPCB prior to start of enhanced production from the mine.	There is no proposal for enhancement of production.
17	Sewage treatment plant should be installed for the colony. ETP should also be provided for workshop and wastewater generated from mining operations.	There is no effluent from mine; hence ETP has not been installed. The used oil in workshop being collected and stored in earmarked area and is being disposed through authorized vendor. The sewage water from domestic uses is being collected through

		individual Septic Tank and Soak Pits.
18	The project proponent should take all precautionary measures during mining operation for conservation and protection of endangered fauna such as Indian Python, <i>Presbytis phayrei</i> , <i>Melurus ursinus</i> etc. Spotted in the study area. Action plan for conservation of flora and fauna shall be prepared and implemented in consultation with the State Forest and Wildlife Department. Necessary allocation of funds for implementation of the conservation plan shall be made and the funds so allocated shall be included in the project cost. Copy of action plan may be submitted to the Ministry and its Regional Office within 3 months.	<p>Action taken for conservation of flora and fauna as under:</p> <p>Permanent pillars are established within the mine lease area.</p> <p>Maintenance of the forest road</p> <p>Ensured necessary air and noise pollution control measures.</p> <p>Daily water sprinkling is being carried out on the forest road</p> <p>Transportation is done only in day time.</p> <p>We have also prepared Wild life conservation plan afresh and presentation done to PCCF, Wildlife, Ranchi.</p>
19	A Final Mine Closure plan along with details of Corpus Fund should be submitted to the Ministry of Environment & Forest 5 years in advance of final mine closure for approval.	Progressive mine closure plan along with mining scheme has been approved by IBM. Final Mine Closure plan (part) has been approved by IBM. Final Mine closure plan will be prepared in due time. Based on the present resource estimate, and peak rated production capacity mentioned in EC, tentative balance life is around 21 years. However, after completion of further detailed exploration, resources estimate vis-à-vis balance life of mine may change based on final resource estimate, EC capacity and cut-off grade at that point of time.
