	2(iv)	A closed circuit cooling device with induced draft should be provided for cooling purposes.						
	2(viii)	Continuous monitoring of ground water should be undertaken by establishing good network of observation wells in consultation with the Central Ground Water Board. Result and data collected should be analysed to ascertain the status of water quality and finding should be submitted for evaluation.	We have made four No. Bore well in consultation with Central Ground Water Board and monitoring of ground water is being carried out regularly by a approved laboratory M/s Prakriti Consultant Services, Lucknow. Results found are well within norms. Report is attached in Annexure-2.					
	2(ix)	All effluents generated in various plant activities should be collected in the Central effluent treatment plant and treated to ensure adherence to specified standard of discharge. The concept of zero discharge should be adapted to maximum possible extent.	All the industrial effluent is collected and get treated in Effluent Treatment Plant which is maintained well to the utmost operational effectiveness and efficiency. We have evolved recycling system and reuse of entire domestic and industrial treated effluents; hence there is zero discharge to Rihand lake. Approved Third party report of treated effluents for dated 11.06.2020 is given in Table. Report is attached in Annexure-3. S.N. Para Unit ETP STP AWTP meter outlet outlet outlet 1 pH 7.64 7.34 7.28 2 BOD mg/l 14.5 16.8 16.8 3 COD mg/l 56.0 56.0 80.0 4 Oil/grease mg/l 1.4 1.4 2.2 5 Fluoride mg/l 1.3 1.2 1.1					
	2(x)	The Existing brick making unit should be further expanded to ensure full utilization of from the existing & proposed power project. Brick made out of ash should be utilized for construction of the expansion project to a maximum possible extent.	The installed capacity of Brick Making Plant is of 60000 Bricks per day. We are utilizing ash Bricks/Blocks for the construction of boundary walls & supplying to nearby Power projects. Apart from this we are collecting fly ash in Dry forms and sending it to Cement companies to maximum possible extent. A list of Cement companies are enclosed in Annexure-4					
	2(xi)	Ash disposal area should be properly lined to avoid seepage of water and ground water contamination. Green belt should be created around the ash disposal area for controlling fugitive dust.	Ash Pond area has been made complete water tight. It has been lined with LDPE (Low density polythene) to avoid seepage of water & ground water contamination. Greenbelt has been developed around the ash pond for controlling the fugitive dust.					
-	2(xiii)	Adequate funding provision should be provided for implementation of environmental mitigative measures with adequate scope of its	We have incurred an amount of Rs. 38036.523 lac up to 5 units. For Units 6&7 (Stage-IV): Rs.5377.981 lac For 8th Unit (Stage-V): Rs.12557.270 lac					

enhancement, if required, in future. Details on the financial requirement, year wise and item wise, should be worked out and submitted to the ministry by December, 1996.

For units 9&10(Stage-VI): Rs. 7694.202 lac. Total expenditure incurred so far on all the 10 Units was Rs. 63665.977 lac as on March, 2020. Detailed up to date Expenditure is attached in Annexure-5.

General Conditions:

S.N.	EC Conditions					
2(v)	Noise level should be limited to	Compliance Status				
	85 dBA & regular maintenance of equipments should be undertaken. For people working in the area of generator halls and other high noise area, ear plug should be provided and their use should be ascertained.	Maintenance of equipment of plant is a regular feature. People working in the noise area have been provided with protection devices; ear plug, ear muff etc. Their use is ascertained by site supervisors.				
2(vi)	For controlling fugitive dust, regular sprinkling of water in coal handling and vulnerable areas of the plant should be ensured.	For controlling fugitive dust, regular sprinkling of water is done in CHP and various areas of the plant. Installed Chem-jet dust suppression system at various discharge points in our coal handling areas and dust extraction devices has been installed to further lessen the dust level. Photograph of water sprinklers in CHP area is attached in Annexure-6				
2(vii)	Afforestation should under taken in and around the power plant and a norm of 1500-2000 trees should be followed. Afforestation plan should be detailed and submitted by December, 1996 and the schedule given should be strictly adhered to.	Green Belt all around the Plant, Colony & Ash disposal area is being developed and tree plantation has been done in the areas as per the plan. A detailed Afforestation plan has been submitted. Apart from this, voluntary afforestation is a regular feature at Renusagar. 34.15% of total area has been developed as green belt.				
2(xii)	Regular Monitoring for SPM, SO2, and NOx around the power plant should be carried out & record maintained. The data so collected should be properly analyzed and	Regular monitoring report of SPM, RPM(PM10,and PM2.5),SO2, NOx around the power plant is being carried out and six monthly report is being sent to Regional Office, North region, Ministry of Environment Forests and Climate Change, Lucknow. Approved Third party report for dated 08-10/06/2020 is given here under which clearly indicates that all parameters are within the prescribed limits. Report is attached in Annexure-7 Source Para Unit Average Value
