

BUILT ON TRUST. PROVEN IN PERFORMANCE.

For over six decades, Hindalco earned its place in India's industrial landscape not only through scale, but also through the trust of those it serves. From supporting India's early industrialisation to enabling the nation's growing aspirations, we have been playing a pivotal role in building materials that are the backbone of our modern economy.

This trust has guided how we have built and strengthened our business over time. By staying closely aligned with market needs and making investments for the future, we have expanded our presence across Aluminium, Copper, and Downstream solutions. Our portfolio today spans a wide range of end-use sectors, such as automotive, aerospace, building and construction, consumer durables, pharma and food packaging, and industrial machinery.

Our performance bears testimony to this journey. Amidst macroeconomic volatility and global disruptions, we have remained focused on operational excellence, continuous improvement, and disciplined execution. Our integrated business model, combined with focused technology adoption and disciplined cost management, has helped us stay competitive while continuing to earn stakeholders' confidence and deliver steady value.

Sustainability shapes the way we operate and our long-term choices. It is reflected in how we steadily improve

resource efficiency, increase the use of renewable energy, and build capabilities that will remain relevant in a dynamic world. Our efforts in recycling, green smelting, and materials that support the energy transition, are part of a broader commitment to growing responsibly, without compromise.

Anchored in a legacy of trust and strengthened by consistent performance, we are prepared for the opportunities and challenges of tomorrow. As industries transform and expectations evolve, we remain focused on anticipating change, enabling sustainable progress, and engineering solutions that contribute to a more resilient, resource efficient future.

Our focused efforts have led to our recognition as the Most Sustainable Aluminium Company in the world sixth year in a row as per 2025 edition of the S&P Global Corporate Sustainability Assessment (CSA) rankings.

We regard this recognition as a reaffirmation of the trust our stakeholders place in us and the responsibility that comes with it. It reflects our commitment to making informed choices, addressing real world challenges, and advancing sustainability with intent. Grounded in trust and demonstrated through outcomes, we continue to focus on creating long term value and making a meaningful contribution to our society.
