## PREFACE

---

Environmental quality monitoring at **Dhangarwadi bauxite mine** situated at Dhangarwadi village, Shahuwadi taluka, Kolhapur, Maharashtra of **M/S. Hindalco Industries Limited** entrusted to **Bhagavathi Ana Labs Pvt. Limited**, during winter season of the year 2017-18.

The monitoring was carried out in the selected locations in core zone and buffer zone around the mine lease area during the months of December, January, February 2017-18.

- Micro-meteorology,
- Ambient air quality,
- Ambient noise level quality,
- Water quality

The data was compiled to assess the current environmental status due to mining as well as allied activities around the surrounding villages in the study area.

Bhagavathi Ana Labs Pvt. Limited, Hyderabad gratefully acknowledges the cooperation extended by management and staff of M/S Hindalco Industries Limited and the village people to their field staff.

## EXECUTIVE SUMMARY

---

**Dhangarwadi Bauxite Mine of M/S Hindalco Industries Limited** includes the study of the ambient air quality, noise level quality, water quality in core zone and buffer zone around the mine lease area during the winter season of the year 2017-18.

### **AMBIENT AIR QUALITY**

The scenario of the existing ambient air quality in the study region has been assessed through a network of selected ambient air quality locations. Pre-calibrated respirable dust sampler has been used for monitoring the existing AAQ status. Maximum, minimum, average and percentile values have been computed from the raw data collected at all individual sampling stations to represent the ambient air quality status.

### **AMBIENT NOISE LEVEL MONITORING**

Mining and allied activities usually cause noise pollution. To know the ambient noise levels in the study area, noise levels were recorded at mining area and nearby villages using noise level recorder.

### **WATER QUALITY MONITORING**

Water quality monitoring consists of the study of surface and ground water sources and its quality in the core and buffer zone of the lease area. Assessment of water quality in the study area and in the mine area includes the quality assessment of parameters as per the Indian Standard IS 10500 (Drinking water standard). Water samples were collected from selected locations during study period and analyzed in the laboratory as per the standard IS & APHA procedures.

### **MICROMETEOROLOGY**

Meteorological scenario helps to understand the trends of the climatic factors. It also helps in the identification of sampling stations in the study area. Meteorological scenario exerts a critical influence on air quality as the pollution arises from the interaction of atmospheric contaminants with adverse meteorological conditions

## AREA DETAILS

### INTRODUCTION

Hindalco Industries is one of the leading producer of aluminum in the country. The company business involves bauxite mining to alumina refining. Alumina metal conversion, sheet, extrusion, foil manufacturing and is spread all over the country. The company is operating number of bauxite mines in Maharashtra, Orissa, Chhattisgarh and Jharkhand to feed the Alumina Plants located in Belgaum, Renukut and Muri.

On getting concurrence from Central Government, Government of Maharashtra has indicated its intention to grant mining lease over of 122.63 ha, out of which 41.80 ha falls under non forest area. As per the directions of the Government of Maharashtra the mining plan was prepared for the entire lease area of 122.63 ha and the same was approved by the Indian Bureau of Mines vide letter no. MP/KLP/MAH-73-SZ, DT.11/11/2003. On submission of approved mining plan Government of Maharashtra has sanctioned mining lease for the production of bauxite for the revenue land of 41.80 and keeping pending of sanction of mining lease for the forest land of 80.83 ha subject to obtaining "No Objection certificate" from the Ministry of Environment and Forest, Govt. of India. The Environmental Clearance was obtained for the production of 0.6 million TPA of bauxite over an entire area of 122.63 ha.

Considering the delay in the process of forest clearance for the area falling under forest land, the Government of Maharashtra has granted mining lease only for the non forest land of 41.80 ha. by keeping pending the grant of mining lease for the forest area. Accordingly, the mining lease was executed by the collector of Kolhapur over an area 41.80 ha. on 05/05/2008 for period of 30 years.

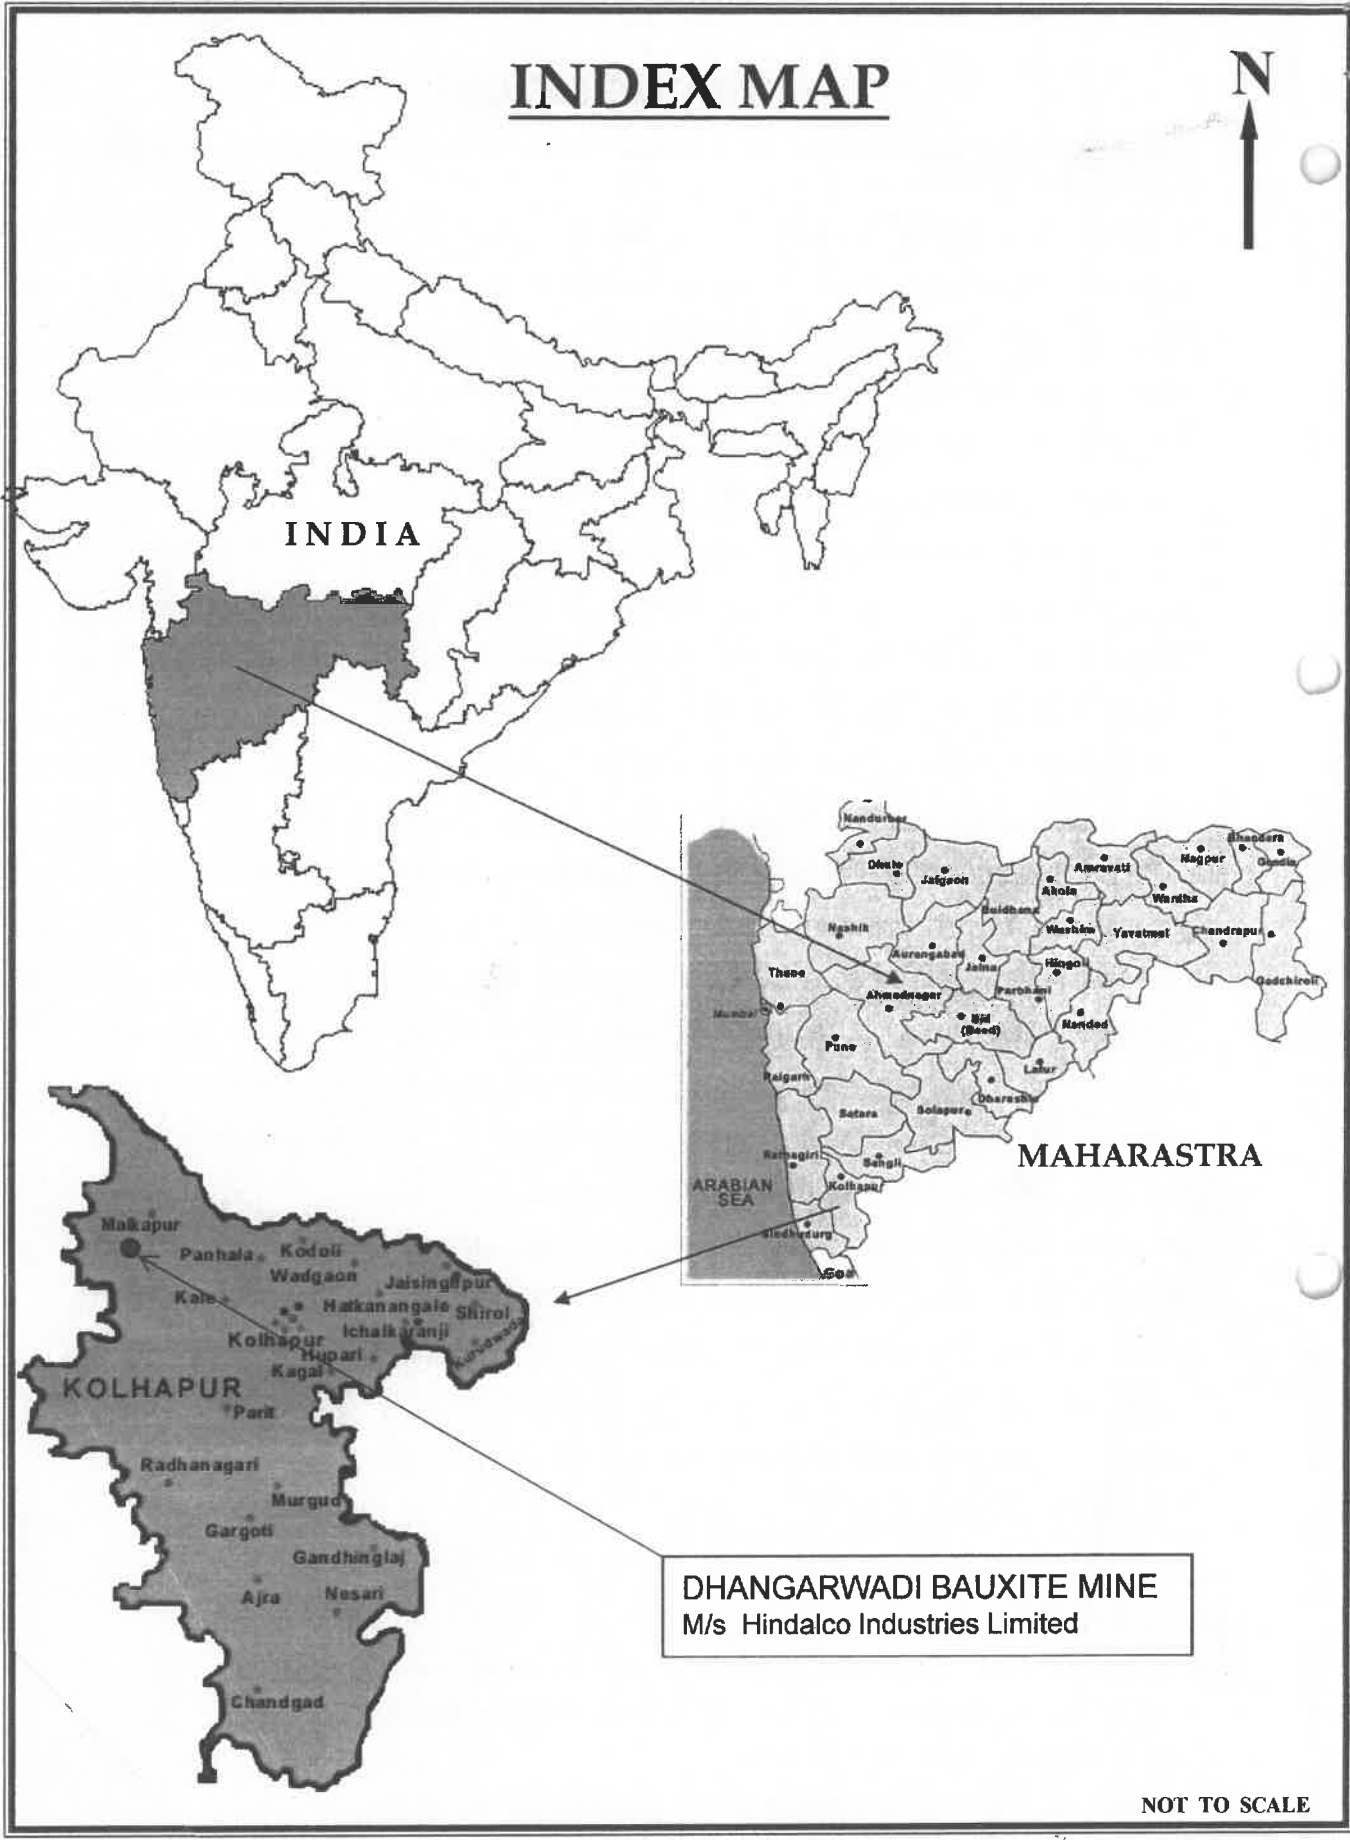

### MINE DETAIL

Dhangarwadi bauxite mine is located near Dhangarwadi village of Shahuwadi taluka of Kolhapur District in Maharashtra state.

### GEOGRAPHICAL DETAILS:

### Details of lease area

The following table gives the details of the area in terms of district, taluka, village, gat no., etc.

| District | Taluka    | Village     | Gat No.   | Area granted (ha) | Owner/Occupier. |
|----------|-----------|-------------|-----------|-------------------|-----------------|
| Kolhapur | Shahuwadi | Dhangarwadi |           |                   |                 |
| "        | "         | "           | 45        | 12.32             | Private land    |
| "        | "         | "           | 46(part)  | 6.53              | Private land    |
| "        | "         | "           | 50(part)  | 2.17              | Private land    |
| "        | "         | "           | 52        | 10.58             | Private land    |
| "        | "         | "           | 53(part)  | 5.09              | Private land    |
| "        | "         | "           | 56(part)  | 2.76              | Private land    |
| Kolhapur | Shahuwadi | Ainwadi     | 106(part) | 2.35              | Private land    |
|          |           |             |           | <b>41.80</b>      |                 |

### ACCESSIBILITY

The district headquarter Kolhapur is connected to Mumbai by broad gauge railway line of South Central Railway of Indian Railway. Daily trains services are available from Mumbai and many other important places to Kolhapur. The nearest (i) railway station is Kolhapur at a distance of 56 kms eastwards with respect to the mines. The district is well served by a network of good roads - National Highways, State Highways and Major District roads. The National Highway Mumbai - Pune- Bangalore passes through Kolhapur.

#### Road

Dhangarwadi is approachable by a distance of 8 kms from Dhopeswar Junction, located 6 kms from Malkapur Town on Ratnagiri - Nagpur National Highway.

#### Rail head

The nearest railway head is Kolhapur which is situated at a distance of about 56 kms by road from the lease area.

#### Sea Port

The nearest sea port is Ratnagiri sea port is about 95 kms form the mine

#### Airport

The nearest airport is at Kolhapur which is around 60 kms by road from the lease area.

## **MICRO-METEOROLOGY**

---

Meteorological data within the project area during the air quality survey period was assessed

### **PRIMARY / BASIC METEOROLOGICAL PARAMETERS**

- Wind Velocity
- Wind Direction

Since the dispersion and diffusion of pollutants mainly depend on the above factors these factors are considered as primary meteorological parameters.

### **SECONDARY METEOROLOGICAL PARAMETERS**

- Ambient Temperature

## ENVIRONMENTAL QUALITY

---

Environmental quality monitoring at **Dhangarwadi Bauxite Mine** of **M/S Hindalco Industries Limited** at Dhangarwadi village of Shahuwadi taluka, Kolhapur district, Maharashtra includes monitoring of various environmental components like air, noise, water quality status within core zone and buffer zone around the mine lease area.

### **AMBIENT AIR QUALITY**

The main aim of the ambient air quality monitoring within core zone and buffer zone was to assess the environmental condition and to know the existing levels of the air pollution in the project area. Thus, air quality has to be frequently monitored to know the extent of pollution due to mining and allied activities. Ambient air quality monitoring stations were set up at eight selected locations, 4 in core zone and 4 in buffer zone.

### **SELECTION OF SAMPLING LOCATIONS**

The status of the ambient air quality has been assessed through ambient air quality-monitoring network. The design of monitoring network in the air quality surveillance program has been based on the following considerations:

- ▣ Meteorological conditions on synoptic scale
- ▣ Topography of the study area
- ▣ Representatives of regional background air quality for obtaining

Ambient air quality monitoring stations were set up at eight locations, 4 in core zone and 4 in buffer zone with due considerations to the above mentioned points.

### **INSTRUMENT USED FOR SAMPLING**

Respirable dust samplers APM-460 BL instruments were used for monitoring suspended particulate matter, particulate matter (PM10), gaseous pollutants etc.

**METHOD FOR TESTING SPM / PM10**

|                   |                          |
|-------------------|--------------------------|
| Name of Pollutant | SPM / PM10               |
| Medium            | Air                      |
| Instrument        | Respirable Dust Sampler  |
| Duration          | Every 24 hours           |
| Mode              | Continuous               |
| Unit              | $\mu\text{g}/\text{m}^3$ |
| Method            | Gravimetric              |

**METHOD FOR TESTING**

| Name of Pollutant | Sulphur dioxide              | Oxides of Nitrogen  |
|-------------------|------------------------------|---|
| Method            | Modified West & Geake Method | Modified Jacob & Hochheiser Modified (Na-Arsenite) Method |
| Frequency         | 8 hour                       | 8 hour  |
| Mode              | Continuous                   | Continuous  |
| Unit              | $\mu\text{g}/\text{m}^3$     | $\mu\text{g}/\text{m}^3$                                  |
| Procedure         | As per IS 5182 (Part II)     | As per IS 5182 (Part IV), 1975                            |

**AMBIENT AIR QUALITY MONITORING STATION**

| SL. NO | STATION CODE | NAME OF SAMPLING STATION | DIRECTION w.r.t MINES LEASE AREA | DISTANCE FROM LEASE AREA (Aerial distance) |
|--------|--------------|--------------------------|----------------------------------|--|
| 1      | A - 1        | Core zone                | ---                              | ---  |

**Monitoring Location Details**

Respirable dust sampler was placed at a height of 3 m above the ground level in above mentioned monitoring locations. These stations were selected so as to assess present pollution level due to mining and allied activities. The observed levels of SPM, PM 10, SO<sub>2</sub>, NO<sub>2</sub> collected during winter season of the year 2017-18 are presented in detail in annexure and are summarized in the following table.

**SUMMARY OF AMBIENT AIR QUALITY**

| Sl. No. | Location             |                        | SPM   | PM 10 | SO <sub>2</sub> | NOx  |
|---------|----------------------|------------------------|-------|-------|-----------------|------|
| 1       | Core zone            | Min                    | 75.0  | 22.8  | 4.2             | 9.2  |
|         |                      | Max                    | 128.7 | 38.8  | 6.6             | 13.6 |
|         |                      | Average                | 102.6 | 31.3  | 5.0             | 10.6 |
|         |                      | 98 <sup>th</sup> %tile | 125.8 | 38.1  | 6.3             | 13.3 |
| 2       | Near Dumping site    | Min                    | 78.0  | 24.9  | BDL             | BDL  |

## AMBIENT NOISE LEVEL QUALITY

Noise is nothing but unwanted sound produced due to various activities. As a part of occupational health and safety measures, certain safeguards have been incorporated to mitigate noise pollution in working environment. Noise pollution survey has been carried out in the study area to assess the impacts of the mining activities. So noise level surveys were carried out at 8 selected locations in and around the mine lease area. Noise survey has been conducted in the study area for the period of 24 hr at each location.

### AMBIENT NOISE LEVEL MONITORING STATIONS

| SL. NO | STATION CODE | NAME OF SAMPLING STATION | DIRECTION w.r.t MINES LEASE AREA | DISTANCE FROM LEASE AREA (Aerial distance) |
|--------|--------------|--------------------------|----------------------------------|--|
| 1      | N- 1         | Core zone                | ---                              | ---  |
| 2      | N - 2        | Near Dumping Site        | ---                              | ---  |
| 3      | N - 3        | Near Haulage Road        | ---                              | ---  |
| 4      | N- 4         | Near Mines office        | ---                              | ---  |
| 5      | N - 5        | Dhangarwadi village      | N                                | 2.1km                                      |
| 6      | N - 6        | Thanewadi village        | ESE                              | 3.7km                                      |
| 7      | N - 7        | Pandapniwadi village     | S                                | 2.2km                                      |
| 8      | N - 8        | Gajapur village          | SW                               | 5.6km                                      |

### NATIONAL AMBIENT NOISE QUALITY STANDARDS

| AREA CODE | CATEGORY OF AREA | LIMIT IN dB (A) Leq |            |
|-----------|------------------|---------------------|------------|
|           |                  | DAY TIME            | NIGHT TIME |
| A         | Industrial Area  | 75                  | 70         |
| B         | Commercial Area  | 65                  | 55         |
| C         | Residential Area | 55                  | 45         |
| D         | Silence Zone     | 50                  | 40         |

**Note:**

1. Day time is reckoned in between 6 am and 9 pm.
2. Night time is reckoned in between 9 pm and 6 am.
3. Silence zone is defined as area upto 100 meters around such premises as hospitals, educational institutions and courts. The silence zones are to be declared by the Competent Authority.
4. Mixed categories of areas should be declared as "one of the four above mentioned categories by the Competent Authority and the corresponding standards shall apply.

| <b>Min</b> | <b>45.9</b>         | <b>46.4</b>                    | <b>47.2</b>                    | <b>46.8</b>                    | <b>58.2</b>                       | <b>60.2</b>                 | <b>60.5</b>                        | <b>61.6</b>               |
| <b>Max</b> | <b>73.5</b>         | <b>74.6</b>                    | <b>73.9</b>                    | <b>75.0</b>                    | <b>74.5</b>                       | <b>75.0</b>                 | <b>72.5</b>                        | <b>73.8</b>               |

All the obtained noise level quality values in core zone and buffer zone are compared with the noise level standards prescribed by Central Pollution Control Board. The observations revealed that the values are found to be within the limit.

## WATER QUALITY

Water quality monitoring consists of the study of water sources and its quality in the core and buffer zone of the lease area. Its study consists of following two important systems of water bodies:

- ▣ Surface water quality.
- ▣ Ground water quality.

### ▣ Surface water quality

Tamrapani and Ghataprabha River are the surface water source in the study area. There are others seasonal nallah which flows in the study area. Proper drainage system has prepared to drag the monsoon water into the mine pit so as to reduce the water pollution.

### ▣ Ground water quality

The most important source of drinking water in the study area is the ground water, which is tapped by a bore well. The buffer zone is good in ground water source.

Assessment of water quality in the study area and in the mine area includes the quality assessment of parameters as per the Indian Standard IS 10500 (Drinking water standard). A total of 8 locations have selected, out of which one in core zone and seven are in buffer zone. Location of water quality monitoring stations is given below.

### WATER QUALITY MONITORING LOCATIONS

| Code  | Name of sampling station | Source of water |
|-------|--------------------------|-----------------|
| W - 1 | Mine pit water           | Surface water   |
| W - 2 | Shali nadi (up stream)   | Surface water   |
| W - 3 | Shali nadi (down stream) | Surface water   |
| W - 4 | Pandapniwadi village     | Ground water    |
| W - 5 | Thanewadi village        | Ground water    |
| W - 6 | Dhangarwadi village      | Ground water    |
| W - 7 | Patewadi village         | Ground water    |
| W - 8 | Bhandarwadi village      | Ground water    |

## SAMPLING DETAILS

The water samples were collected from selected sampling locations, which are coming under core zone and buffer zone around the mine lease area. Samples were collected in the winter season of the year 2017-18 as per the prescribed sample collecting methods and analyzed as per the IS standard procedures. Analysis report of water samples are given below.

### SURFACE WATER QUALITY

**NOTE: The results relate only to the condition prevailing at the time of sampling**

## RESULTS & DISCUSSION

- The pH of the study area varies from 6.55 to 6.67 in the study area. The permissible range of pH is 6.5 to 8.5.
- Dissolved Oxygen content of the study area has been found to be in the range of 3.80 to 7
- Total Dissolved Solids found to be in the range of 41 to 132 mg/l in the water sample collected in study area. As per IS 10500 standard for drinking water, the desirable limit is 500 mg/l and maximum permissible limit is 2000 mg/l.
- Alkalinity as  $\text{CaCO}_3$  is found to be in the range of 12 to 48 in the water sample collected in study area. As per IS 10500 standard for drinking water, the desirable limit is 200 mg/l and maximum permissible limit is 600 mg/l.
- Total hardness as  $\text{CaCO}_3$  of the water sample collected in the study area is found to in the range of 24 to 114 mg/l. As per IS 10500 standard for drinking water, the desirable limit is 300 mg/l and maximum permissible limit is 600 mg/l.
- Chloride of the water sample collected in the study area is found to in the range of 8.70 to 20.3 mg/l. As per IS 10500 standard for drinking water, the desirable limit is 250 mg/l and maximum permissible limit is 1000 mg/l.
- Calcium content of the water in the study area found to be in the range of 3.21 to 36 mg/l. As per IS 10500 standard for drinking water, the desirable limit 75 mg/l and maximum permissible limit is 200 mg/l.
- Magnesium content of the water in the study area found to be in the range of .84 to 6.24 mg/l.
- Iron content of the water in the study area found to be in the range of .12 to .53mg/l. As per IS 10500 standard for drinking water, the desirable limit 0.3 mg/l and maximum permissible limit is 1.0 mg/l.

## PREFACE

---

Environmental quality monitoring at **Dhangarwadi bauxite mine** situated at Dhangarwadi village, Shahuwadi taluka, Kolhapur, Maharashtra of **M/S. Hindalco Industries Limited** entrusted to **Bhagavathi Ana Labs Pvt. Limited, Hyderabad** during Post Monsoon season of the year 2017.

The monitoring was carried out in the selected locations in core zone and buffer zone around the mine lease area during the months of August, September & October 2017 for the following environmental parameters.

- Micro-meteorology,
- Ambient air quality,
- Ambient noise level quality,
- Water quality

The data was compiled to assess the current environmental status due to mining as well as allied activities around the surrounding villages in the study area.

Bhagavathi Ana Labs Pvt. Limited, Hyderabad gratefully acknowledges the cooperation extended by management and staff of M/S Hindalco Industries Limited and the village people to their field staff.

## EXECUTIVE SUMMARY

---

**Dhangarwadi Bauxite Mine of M/S Hindalco Industries Limited** includes the study of the ambient air quality, noise level quality, water quality in core zone and buffer zone around the mine lease area during the Post Monsoon season of the year 2017.

### AMBIENT AIR QUALITY

The scenario of the existing ambient air quality in the study region has been assessed through a network of selected ambient air quality locations. Pre-calibrated respirable dust sampler has been used for monitoring the existing AAQ status. Maximum, minimum, average and percentile values have been computed from the raw data collected at all individual sampling stations to represent the ambient air quality status.

### AMBIENT NOISE LEVEL MONITORING

Mining and allied activities usually cause noise pollution. To know the ambient noise levels in the study area, noise levels were recorded at mining area and nearby villages using noise level recorder.

### WATER QUALITY MONITORING

Water quality monitoring consists of the study of surface and ground water sources and its quality in the core and buffer zone of the lease area. Assessment of water quality in the study area and in the mine area includes the quality assessment of parameters as per the Indian Standard IS 10500 (Drinking water standard). Water samples were collected from selected locations during study period and analyzed in the laboratory as per the standard IS & APHA procedures.

### MICROMETEOROLOGY

Meteorological scenario helps to understand the trends of the climatic factors. It also helps in the identification of sampling stations in the study area. Meteorological scenario exerts a critical influence on air quality as the pollution arises from the interaction of atmospheric contaminants with adverse meteorological conditions

## AREA DETAILS

### INTRODUCTION

Hindalco Industries is one of the leading producer of aluminum in the country. The company business involves bauxite mining to alumina refining. Alumina metal conversion, sheet, extrusion, foil manufacturing and is spread all over the country. The company is operating number of bauxite mines in Maharashtra, Orissa, Chhattisgarh and Jharkhand to feed the Alumina Plants located in Belgaum, Renukut and Muri.

On getting concurrence from Central Government, Government of Maharashtra has indicated its intention to grant mining lease over of 122.63 ha, out of which 41.80 ha falls under non forest area. As per the directions of the Government of Maharashtra the mining plan was prepared for the entire lease area of 122.63 ha and the same was approved by the Indian Bureau of Mines vide letter no. MP/KLP/MAH-73-SZ, DT.11/11/2003. On submission of approved mining plan Government of Maharashtra has sanctioned mining lease for the production of bauxite for the revenue land of 41.80 and keeping pending of sanction of mining lease for the forest land of 80.83 ha subject to obtaining "No Objection certificate" from the Ministry of Environment and Forest, Govt. of India. The Environmental Clearance was obtained for the production of 0.6 million TPA of bauxite over an entire area of 122.63 ha.

Considering the delay in the process of forest clearance for the area falling under forest land, the Government of Maharashtra has granted mining lease only for the non forest land of 41.80 ha. by keeping pending the grant of mining lease for the forest area. Accordingly, the mining lease was executed by the collector of Kolhapur over an area 41.80 ha. on 05/05/2008 for period of 30 years.

### MINE DETAIL

Dhangarwadi bauxite mine is located near Dhangarwadi village of Shahuwadi taluka of Kolhapur District in Maharashtra state.

### GEOGRAPHICAL DETAILS:

Latitude : 16<sup>0</sup> 52' to 16<sup>0</sup> 56'

### Details of lease area

The following table gives the details of the area in terms of district, taluka, village, gat no., etc.

| District | Taluka    | Village     | Gat No.   | Area granted (ha) | Owner/Occupier. |
|----------|-----------|-------------|-----------|-------------------|-----------------|
| Kolhapur | Shahuwadi | Dhangarwadi |           |                   |                 |
| "        | "         | "           | 45        | 12.32             | Private land    |
| "        | "         | "           | 46(part)  | 6.53              | Private land    |
| "        | "         | "           | 50(part)  | 2.17              | Private land    |
| "        | "         | "           | 52        | 10.58             | Private land    |
| "        | "         | "           | 53(part)  | 5.09              | Private land    |
| "        | "         | "           | 56(part)  | 2.76              | Private land    |
| Kolhapur | Shahuwadi | Ainwadi     | 106(part) | 2.35              | Private land    |
|          |           |             |           | <b>41.80</b>      |                 |

### ACCESSIBILITY

The district headquarter Kolhapur is connected to Mumbai by broad gauge railway line of South Central Railway of Indian Railway. Daily trains services are available from Mumbai and many other important places to Kolhapur. The nearest (i) railway station is Kolhapur at a distance of 56 kms eastwards with respect to the mines. The district is well served by a network of good roads - National Highways, State Highways and Major District roads. The National Highway Mumbai - Pune- Bangalore passes through Kolhapur.

#### Road

Dhangarwadi is approachable by a distance of 8 kms from Dhopeswar Junction, located 6 kms from Malkapur Town on Ratnagiri - Nagpur National Highway.

#### Rail head

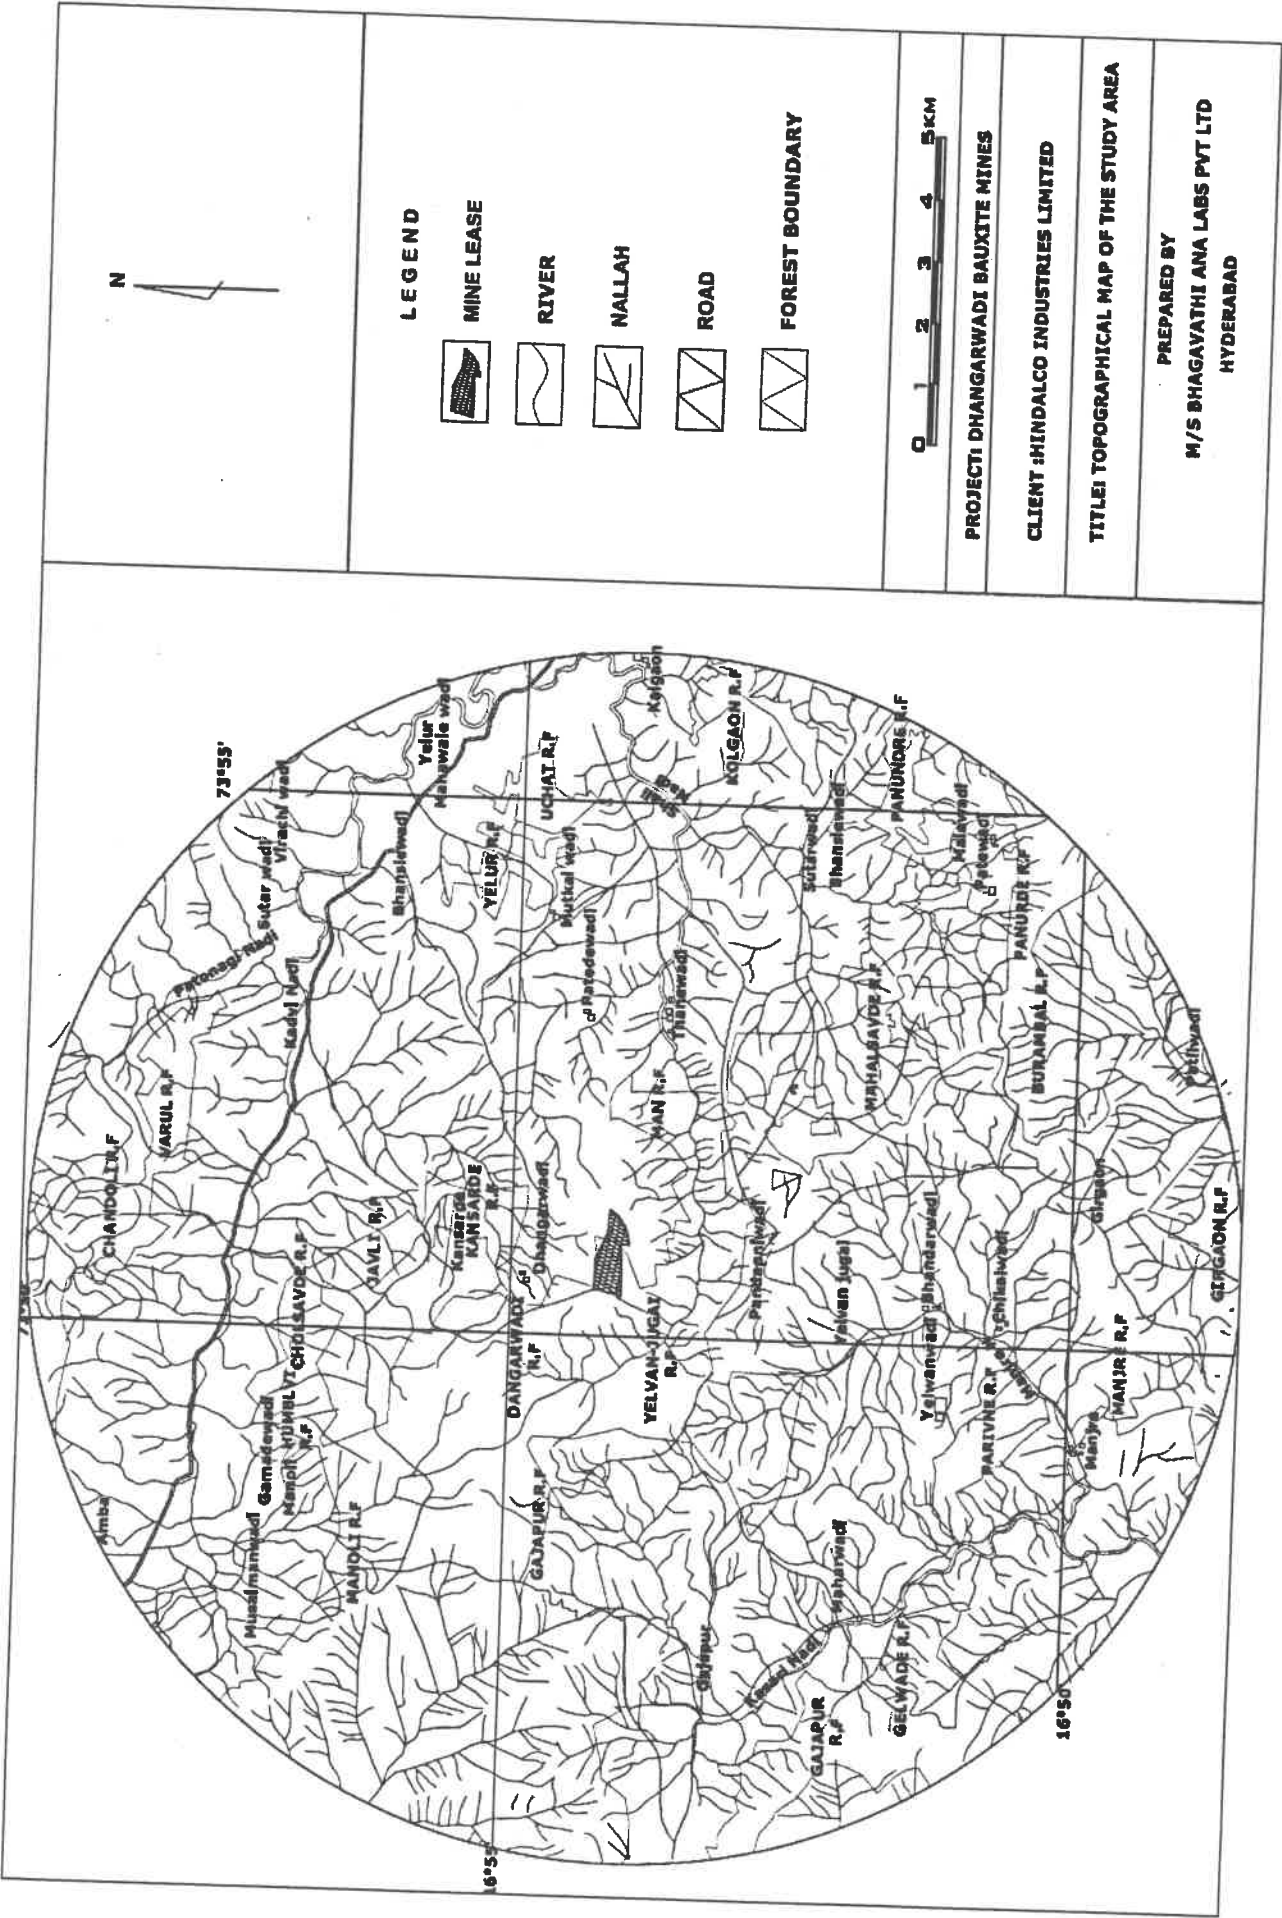

The nearest railway head is Kolhapur which is situated at a distance of about 56 kms by road from the lease area.

#### Sea Port

The nearest sea port is Ratnagiri sea port is about 95 kms from the mine

#### Airport

The nearest airport is at Kolhapur which is around 60 kms by road from the lease area.

## **MICRO-METEOROLOGY**

---

Meteorological data within the project area during the air quality survey period was assessed

### **PRIMARY / BASIC METEOROLOGICAL PARAMETERS**

- Wind Velocity
- Wind Direction

Since the dispersion and diffusion of pollutants mainly depend on the above factors these factors are considered as primary meteorological parameters.

### **SECONDARY METEOROLOGICAL PARAMETERS**

- Ambient Temperature

## ENVIRONMENTAL QUALITY

---

Environmental quality monitoring at **Dhangarwadi Bauxite Mine** of **M/S Hindalco Industries Limited** at Dhangarwadi village of Shahuwadi taluka, Kolhapur district, Maharashtra includes monitoring of various environmental components like air, noise, water quality status within core zone and buffer zone around the mine lease area.

### AMBIENT AIR QUALITY

The main aim of the ambient air quality monitoring within core zone and buffer zone was to assess the environmental condition and to know the existing levels of the air pollution in the project area. Air pollution forms an important and critical factor to study the environmental issues in the mining areas. Thus, air quality has to be frequently monitored to know the extent of pollution due to mining and allied activities. Ambient air quality monitoring stations were set up at eight selected locations, 4 in core zone and 4 in buffer zone.

### SELECTION OF SAMPLING LOCATIONS

The status of the ambient air quality has been assessed through ambient air quality-monitoring network. The design of monitoring network in the air quality surveillance program has been based on the following considerations:

- Meteorological conditions on synoptic scale
- Topography of the study area
- Representatives of regional background air quality for obtaining

Ambient air quality monitoring stations were set up at eight locations, 4 in core zone and 4 in buffer zone with due considerations to the above mentioned points.

### INSTRUMENT USED FOR SAMPLING

Respirable dust samplers APM-460 BL instruments were used for monitoring suspended particulate matter, particulate matter (PM10), gaseous pollutants etc.

**METHOD FOR TESTING SPM / PM10**

|                   |                          |
|-------------------|--------------------------|
| Name of Pollutant | SPM / PM10               |
| Medium            | Air                      |
| Instrument        | Respirable Dust Sampler  |
| Duration          | Every 24 hours           |
| Mode              | Continuous               |
| Unit              | $\mu\text{g}/\text{m}^3$ |
| Method            | Gravimetric              |

**METHOD FOR TESTING**

| Name of Pollutant | Sulphur dioxide              | Oxides of Nitrogen  |
|-------------------|------------------------------|---|
| Method            | Modified West & Geake Method | Modified Jacob & Hochheiser Modified (Na-Arsenite) Method |
| Frequency         | 8 hour                       | 8 hour  |
| Mode              | Continuous                   | Continuous  |
| Unit              | $\mu\text{g}/\text{m}^3$     | $\mu\text{g}/\text{m}^3$                                  |
| Procedure         | As per IS 5182 (Part II)     | As per IS 5182 (Part IV), 1975                            |

**AMBIENT AIR QUALITY MONITORING STATION**

| SL. NO | STATION CODE | NAME OF SAMPLING STATION | DIRECTION w.r.t MINES LEASE AREA | DISTANCE FROM LEASE AREA (Aerial distance) |
|--------|--------------|--------------------------|----------------------------------|--|

**Monitoring Location Details**

Respirable dust sampler was placed at a height of 3 m above the ground level in above mentioned monitoring locations. These stations were selected so as to assess present pollution level due to mining and allied activities. The observed levels of SPM, PM 10, SO<sub>2</sub>, NO<sub>x</sub> collected during Post Monsoon season of the year 2017 are presented in detail in annexure and are summarized in the following table.

### AMBIENT NOISE LEVEL QUALITY

Noise is nothing but unwanted sound produced due to various activities. As a part of occupational health and safety measures, certain safeguards have been incorporated to mitigate noise pollution in working environment. Noise pollution survey has been carried out in the study area to assess the impacts of the mining activities. So noise level surveys were carried out at 8 selected locations in and around the mine lease area. Noise survey has been conducted in the study area for the period of 24 hr at each location.

#### AMBIENT NOISE LEVEL MONITORING STATIONS

| SL. NO | STATION CODE | NAME OF SAMPLING STATION | DIRECTION w.r.t MINES LEASE AREA | DISTANCE FROM LEASE AREA (Aerial distance) |
|--------|--------------|--------------------------|----------------------------------|--|
| 1      | N- 1         | Core zone                | ---                              | ---  |
| 2      | N - 2        | Near Dumping Site        | ---                              | ---  |
| 3      | N - 3        | Near Haulage Road        | ---                              | ---  |
| 4      | N- 4         | Near Mines office        | ---                              | ---  |
| 5      | N - 5        | Dhangarwadi village      | N                                | 2.1km                                      |
| 6      | N - 6        | Thanewadi village        | ESE                              | 3.7km                                      |
| 7      | N - 7        | Pandapniwadi village     | S                                | 2.2km                                      |
| 8      | N - 8        | Gajapur village          | SW                               | 5.6km                                      |

#### NATIONAL AMBIENT NOISE QUALITY STANDARDS

| AREA CODE | CATEGORY OF AREA | LIMIT IN dB (A) Leq |            |
|-----------|------------------|---------------------|------------|
|           |                  | DAY TIME            | NIGHT TIME |
| A         | Industrial Area  | 75                  | 70         |
| B         | Commercial Area  | 65                  | 55         |
| C         | Residential Area | 55                  | 45         |
| D         | Silence Zone     | 50                  | 40         |

**Note:**

1. Day time is reckoned in between 6 am and 9 pm.
2. Night time is reckoned in between 9 pm and 6 am.
3. Silence zone is defined as area upto 100 meters around such premises as hospitals, educational institutions and courts. The silence zones are to be declared by the Competent Authority.
4. Mixed categories of areas should be declared as "one of the four above mentioned categories by the Competent Authority and the corresponding standards shall apply.

All the obtained noise level quality values in core zone and buffer zone are compared with the noise level standards prescribed by Central Pollution Control Board. The observations revealed that the values are found to be within the limit.

## WATER QUALITY

Water quality monitoring consists of the study of water sources and its quality in the core and buffer zone of the lease area. Its study consists of following two important systems of water bodies:

- ▣ Surface water quality.
- ▣ Ground water quality.

### ▣ Surface water quality

Tamrapani and Ghataprabha River are the surface water source in the study area. There are others seasonal nallah which flows in the study area. Proper drainage system has prepared to drag the monsoon water into the mine pit so as to reduce the water pollution.

### ▣ Ground water quality

The most important source of drinking water in the study area is the ground water, which is tapped by a bore well. The buffer zone is good in ground water source.

Assessment of water quality in the study area and in the mine area includes the quality assessment of parameters as per the Indian Standard IS 10500 (Drinking water standard). A total of 8 locations have selected, out of which one in core zone and seven are in buffer zone. Location of water quality monitoring stations is given below.

### WATER QUALITY MONITORING LOCATIONS

| Code  | Name of sampling station | Source of water |
|-------|--------------------------|-----------------|
| W - 1 | Mine pit water           | Surface water   |
| W - 2 | Shali nadi (up stream)   | Surface water   |
| W - 3 | Shali nadi (down stream) | Surface water   |
| W - 4 | Pandapniwadi village     | Ground water    |
| W - 5 | Thanewadi village        | Ground water    |
| W - 6 | Dhangarwadi village      | Ground water    |
| W - 7 | Patewadi village         | Ground water    |
| W - 8 | Bhandarwadi village      | Ground water    |

**SAMPLING DETAILS**

The water samples were collected from selected sampling locations, which are coming under core zone and buffer zone around the mine lease area. Samples were collected in the Post Monsoon season of the year 2017 as per the prescribed sample collecting methods and analyzed as per the IS standard procedures. analysis report of water samples are given below.

**SURFACE WATER QUALITY**

Date of Sampling: 25.11.2017

BDL: Below Detectable Limit

mg/l: Milligram per liter

**NOTE: The results relate only to the condition prevailing at the time of sampling**

## RESULTS & DISCUSSION

- ❑ The pH of the study area varies from 6.51 to 6.93 in the study area. The permissible range of pH is 6.5 to 8.5.
- ❑ Dissolved Oxygen content of the study area has been found to be in the range of 4 to 6.60.
- ❑ Total Dissolved Solids found to be in the range of 32 to 66 mg/l in the water sample collected in study area. As per IS 10500 standard for drinking water, the desirable limit is 500 mg/l and maximum permissible limit is 2000 mg/l.
- ❑ Alkalinity as  $\text{CaCO}_3$  is found to be in the range of 8 to 20 in the water sample collected in study area. As per IS 10500 standard for drinking water, the desirable limit is 200 mg/l and maximum permissible limit is 600 mg/l.
- ❑ Total hardness as  $\text{CaCO}_3$  of the water sample collected in the study area is found to be in the range of 42 to 56 mg/l. As per IS 10500 standard for drinking water, the desirable limit is 300 mg/l and maximum permissible limit is 600 mg/l.
- ❑ Chloride of the water sample collected in the study area is found to be in the range of 8.70 to 13.53 mg/l. As per IS 10500 standard for drinking water, the desirable limit is 250 mg/l and maximum permissible limit is 1000 mg/l.
- ❑ Calcium content of the water in the study area found to be in the range of 9.60 to 14.40 mg/l. As per IS 10500 standard for drinking water, the desirable limit 75 mg/l and maximum permissible limit is 200 mg/l.
- ❑ Magnesium content of the water in the study area found to be in the range of 2.40 to 4.80 mg/l.
- ❑ Iron content of the water in the study area found to be in the range of 0.05 to 0.5 mg/l. As per IS 10500 standard for drinking water, the desirable limit 0.3 mg/l and maximum permissible limit is 1.0 mg/l.
